

# Freefalling Water

## Question:

Will the water come out more quickly or slowly when the bottle is dropped?

## Hypothesis:

- I think the water will come out more slowly.
- I think the water will come out more quickly.
- I think the water will come out the same.

## Method:

1. Covering the hole with your thumb, fill the bottle with water.
2. Uncover the hole and see the water stream out.
3. Before the water runs out, drop the bottle, and watch the stream of water. Observe whether the water comes out more quickly, more slowly, or the same.

## Results & Conclusion:
